

CLAUDE CODE × SERVICENOW SDK

Video 1: Environment Setup

Install SDK + Node.js + Claude Code Skill

By Tushar | ReAcademy.ai | March 2026

Prerequisites

- A computer running macOS, Windows, or Linux
- Terminal / command line access
- A Claude Pro, Max, or Team subscription (for Claude Code)
- Internet connection for npm installs

Step 1 — Install Node.js (v20+)

The ServiceNow SDK requires Node.js version 20 or later.

Option A: Direct Download

1. Go to <https://nodejs.org> and download the LTS version (v20+)
2. Run the installer and follow the prompts
3. Verify the installation:

```
node --version
```

Expected output: v20.x.x or higher

Option B: Using NVM (Recommended)

NVM (Node Version Manager) lets you switch between Node versions easily.

```
nvm install 20
```

```
nvm use 20
```

```
node --version
```

Also verify npm is available:

```
npm --version
```

TIP: Using *nvm* is recommended so you can switch Node versions without affecting other projects on your machine.

Step 2 — Install the ServiceNow SDK

Install the SDK globally so the now-sdk CLI is available from any directory.

```
npm install -g @servicenow/sdk
```

Verify the installation:

```
now-sdk --version
```

Expected output: 4.4.0 or later.

TIP: On macOS/Linux, if you get a permissions error, run: `sudo npm install -g @servicenow/sdk`

NOTE: The SDK v4.x series introduced front-end framework support, an overhauled plugin architecture, and new Fluent APIs. Make sure you are on v4+.

Step 3 — Install Claude Code

Claude Code is Anthropic's command-line AI agent. It reads your project files, writes code, and runs builds — all from natural language.

```
npm install -g @anthropic-ai/claude-code
```

Verify:

```
claude --version
```

On first launch, Claude Code will ask you to sign in with your Anthropic account. You need a Pro, Max, or Team subscription.

Step 4 — Add the sndev Skill to Claude Code

A “skill” is a knowledge file that teaches Claude Code about a specific domain. Our sndev skill teaches it everything about the ServiceNow SDK and Fluent API.

4a. Create the skills directory

```
mkdir -p ~/.claude/skills/sndev
```

4b. Download the skill file

Clone or download the companion repo:

```
git clone https://github.com/yvain13/Market_research_app.git
```

Copy the SKILL.md file:

```
cp "Market_research_app/Tutorial instructions and skills/SKILL.md" ~/.claude/skills/sndev/SKILL.md
```

4c. Verify the skill is loaded

Launch Claude Code from any directory:

```
claude
```

Type this prompt:

```
What ServiceNow SDK commands do you know?
```

If Claude lists commands like now-sdk build, now-sdk install, now-sdk transform — the skill is loaded and working.

TIP: You can also add skills at the project level by placing them at `.claude/skills/sndev/SKILL.md` inside a project folder. Project-level skills take precedence over personal ones.

Step 5 — Verify Your Complete Setup

Run these commands to confirm everything is ready:

Command	Expected Result
node --version	v20.x.x or higher
npm --version	v10.x.x or higher
now-sdk --version	4.4.0 or later
claude --version	Version number displayed
ls ~/.claude/skills/sndev/SKILL.md	File exists (no error)

All green? You're ready for Video 2: Authentication.
